WHO WE ARE

The Airbunker, a part of a group of companies called NETRONIC, has been on the market for over 15 years. Our team has gone from a paintball club to a world-known manufacturer of laser tag equipment, VR attractions, and inflatable bunkers.

The Airbunker is a company specializing in producing inflatable figures for laser tag. With designs and high-quality materials, the company offers a wide range of inflatable obstacles and structures that enhance the excitement and realism of laser tag games.

Our team has come to the conclusion that we need to rethink the company's structure to align with what we are doing today and represent something more than just a product.

WE ARE NETRONIC NOW

NETRONIC is a group of companies encompassing the following trade brands: LASERTAG.NET, GALAXY, VION VR, Airbunker. This Universe includes all the branded equipment we produce and our premium quality service.

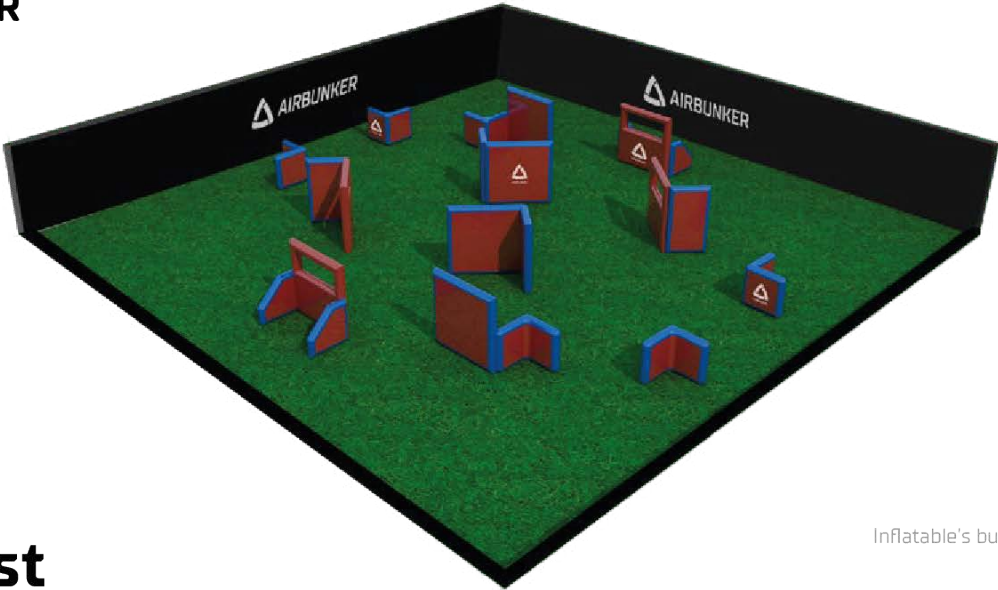

We don't just develop products and services, we provide comprehensive business support at all stages, from consulting on the choice of game sets to opening a laser tag center with its further promotion. With renaming, we claim that we are more than just manufacturers, we are business partners.

The water bladder in the inflatable bunker is a special insulated compartment located in the lower part of the bunker. This compartment is intended for filling bunkers with water and installing them on the field without additional fixings (sandbags, pegs, etc.).

Bunkers with a water-filled compartment do not require any additional anchoring on the field and have a «roly-poly» effect when they fall. This means that because of the weight of the water, when a player collides with a bunker on the course, the bunker will always remain in place (the weight of the water-filled compartment ranges from 110,2 to 220,5 ft). And if the bunker falls on its side, due to the pressure of water in the insulated compartment inside, the bunker returns to its original position (see video review).

On Pro Series bunkers, the water fill valve is located under the bunker.

IMPORTANT!

Pro Series bunkers can be operated with or without a water-filled compartment. The bunker is simply inflated with air and placed on the field. All Pro Series bunkers include a rail for securing the bunker to the field using loads, pegs, etc.

The fastening system with water filling reliably fixes inflatable bunkers and ensures their stable position. No special knowledge or tools are required to install the products. The compartments of the bladders are filled with water according to the instructions.
